

Junior Robostars Application Task

Purpose: Our theme this year will be CITY SHAPER. This year we will learn about civil, structural, and environmental engineers. These are people that analyze building designs and sites for possible problems, then create solutions to help people. We are looking for big thinkers and problem solvers, just like these engineers!

This task is a required piece of your application. If you have any questions, please find Ms. Orillion, Ms. Pann, or Ms. Covington.

Task:

Water is all around us! As part of your application, design an ecosystem with one animal or creature in a water habitat. Explain how this animal survives in its habitat (such as adaptations, behaviors, etc.). In the space provided, draw the ecosystem and your animal. Then, explain how this animal survives in its ecosystem.

Due: September 18, 2019

No late entries will be accepted.

Show/explain your design here!
